DESCRIPTORS: *Labor, *Economics, *Food, Man, Culture, Anthropological data, Australia, Pacific Islands.

We have characterized the various elements of division of labor in the Australian, Papuan-Melanesian and Polynesian tribes. We have shown in what manner the division of labor determines the various aspects of the social life of these peoples. The division of labor among the Australian tribes brought about their

The influence of positive cesium ions produced by thermal ionization at the tungsten cathode upon the shape of voltampere characteristics of the electron current was studied by experimental investigations of (1) the conditions required for complete compensation [illegible] of the electrons by the charge on the positive cesium ion; (2) the operation of the diode with an external resistance when the plate voltage is disconnected; and (3) the influence of the magnetic field upon the diode current.

A study was made of the excited absorption of X-irradiated phosphors on NaCl, KCl, KBr, activated with In, Tl, Ag, Cu, Mn, Pb, Cd. Bivalent ions serve as affective trapping centres for the electrons. No diminution was observed in the activator absorption in the phosphors activated with In and Tl after the X-irradiation. The conclusion was drawn that the ions of the activator cannot serve as trapping centres for the holes, and the hole mechanism of migration of energy from the basic substance to the impurity centres is (Physics--Solid State, TT, v. 5, no. 12) (over)

An improved method is described for investigating photoelectric polarization with self-compensation. Results of an investigation of kinetics, stationary values and the excitation spectrum of the photoelectric polarization of ZnS phosphors are described. The characteristics of photoelectric polarization of dielectrics with trapping levels at an average depth and dipolar conductivity are examined. It is shown that a

DESCRIPTORS: *Semiconductors, *Crystal phosphors, *Zinc compounds, *Cadmium compounds, Sulfides, Mixtures, Photoelectric effect, Polarization, Spectrographic analysis.

An approximate relationship was found between the excitation spectra of photoelectric polarization and other spectra of the phosphors. It appeared that the internal photoelectric effect in the fundamental absorption band is basically caused by free electrons. (Author)
